# BASIC NETWORKING COMMANDS IN WINDOWS OPERATING SYSTEM

AIM: To study about commands in windows operating system

The Windows operating system provides its user with a powerful tool, Command Prompt, which allows the user to access and configure system settings and data. The network commands prove helpful when there is a need to configure or troubleshoot the network settings of our system.

## 1. IPCONFIG

The IPCONFIG network command provides a comprehensive view of information regarding the <u>IP address</u> configuration of the device we are currently working on.

The IPConfig command also provides us with some variation in the primary command that targets specific system settings or data, which are:

- IPConfig/all Provides primary output with additional information about network adapters.
- IPConfig/renew Used to renew the system's IP address.
- IPConfig/release Removes the system's current IP address.

Command to enter in Prompt - ipconfig

```
Windows IP Configuration
Wireless LAN adapter Local Area Connection* 3:
   Media State . . . . . . . . . : Media disconnected
   Connection-specific DNS Suffix .:
Wireless LAN adapter Local Area Connection* 4:
   Media State . . . . . . . . . . . . . Media disconnected
   Connection-specific DNS Suffix .:
Wireless LAN adapter Wi-Fi:
   Connection-specific DNS Suffix .:
   IPv6 Address. . . . . . : 2401:4900:634e:2702:bedb:29cb:624c:3827
Temporary IPv6 Address. . . . : 2401:4900:634e:2702:281f:7e59:f3ca:845d
   Link-local IPv6 Address . . . . : fe80::a411:246:66cd:3bf1%15
   IPv4 Address. . . . . . . . . : 192.168.233.233
   Subnet Mask . . . . . . . . . . : 255.255.255.0
   Default Gateway . . . . . . . : fe80::7cef:64ff:fe0e:186e%15
                                        192.168.233.194
Ethernet adapter Bluetooth Network Connection:
                   . . . . . . . . : Media disconnected
   Media State . .
   Connection-specific DNS Suffix .
```

### 2. NSLOOKUP

The NSLOOKUP command is used to troubleshoot network connectivity issues in the system. Using the nslookup command, we can access the information related to our system's DNS server, i.e., domain name and IP address.

Command to enter in Prompt – nslookup

```
> nslookup www.google.com
Server: www.google.com
Addresses: 2404:6800:4007:82c::2004
142.250.67.132
```

### 3. HOSTNAME

The HOSTNAME command displays the hostname of the system. The hostname command is much easier to use than going into the system settings to search for it.

Command to enter in Prompt - hostname

```
C:\Users\kkknf>hostname
LAPTOP-6H60T6N4
```

#### 4. PING

The Ping command is one of the most widely used commands in the prompt tool, as it allows the user to check the connectivity of our system to another host.

This command sends four experimental packets to the destination host to check whether it receives them successfully, if so, then, we can communicate with the destination host. But in case the packets have not been received, that means, no communication can be established with the destination host.

Command to enter in Prompt - ping www.destination\_host\_name.com

```
Pinging www.google.com [2404:6800:4009:811::2004] with 32 bytes of data:
Reply from 2404:6800:4009:811::2004: time=76ms
Reply from 2404:6800:4009:811::2004: time=81ms
Reply from 2404:6800:4009:811::2004: time=53ms
Reply from 2404:6800:4009:811::2004: time=53ms

Ping statistics for 2404:6800:4009:811::2004:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
Approximate round trip times in milli-seconds:
    Minimum = 53ms, Maximum = 81ms, Average = 65ms
```

#### 5. TRACERT

The TRACERT command is used to trace the route during the transmission of the data packet over to the destination host and also provides us with the "hop" count during transmission.

Using the number of hops and the hop IP address, we can troubleshoot network issues and identify the point of the problem during the transmission of the data packet.

```
Tracing route to www.google.com [2404:6800:4007:824::2004]
over a maximum of 30 hops:
                 8 ms 5 ms 2401:4900:634e:2702::2a
        7 ms
        *

## 6. NETSTAT

The Netstat command as the name suggests displays an overview of all the network connections in the device. The table shows detail about the connection protocol, address, and the current state of the network.

# Command to enter in Prompt – netstat

```
Foreign Address State
20.212.88.117:https ESTABLISHED
ec2-13-126-70-76:https ESTABLISHED
server-108-158-251-69:https TIME_WAIT
              192.168.233.233:50538
192.168.233.233:50539
192.168.233.233:50975
                                                                                                             ESTABLISHED

## 7. ARP(Address Resolution Protocol)

The ARP command is used to access the mapping structure of IP addresses to the MAC address. This provides us with a better understanding of the transmission of packets in the network channel.

```
Interface: 192.168.233.233 --- 0xf
  Internet Address
                        Physical Address
                                              Type
  192.168.233.194
                        7e-ef-64-0e-18-6e
                                              dynamic
                        ff-ff-ff-ff-ff
 192.168.233.255
                                              static
                                              static
 224.0.0.22
                        01-00-5e-00-00-16
 224.0.0.251
                        01-00-5e-00-00-fb
                                              static
 224.0.0.252
                        01-00-5e-00-00-fc
                                              static
  239.255.255.250
                        01-00-5e-7f-ff-fa
                                              static
                        ff-ff-ff-ff-ff
  255.255.255.255
                                              static
```

## 8. SYSTEMINFO

Using the SYSTEMINFO command, we can access the system's hardware and software details, such as processor data, booting data, Windows version, etc.

Command to enter in Prompt – systeminfo

```
Host Name:
                           LAPTOP-6H60T6N4
OS Name:
                           Microsoft Windows 11 Home Single Language
OS Version:
                           10.0.22631 N/A Build 22631
OS Manufacturer:
                           Microsoft Corporation
OS Configuration:
